

Joshua Huang

(510) 520-1825 | joh095@ucsd.edu | [linkedin.com/in/joshuahuang22](https://www.linkedin.com/in/joshuahuang22)

EDUCATION

University of California, San Diego – Halıcıoğlu Data Science Institute
B.S. in Data Science, Business Analytics Minor | GPA: 3.52

Expected Graduation: Dec 2027

PROFESSIONAL EXPERIENCE

H Partners, Taipei – *Summer Analyst*

Jun 2026 – Aug 2026

- Led **competitive-intelligence analysis** for a live cross-border investment transaction, benchmarking the target against three competitors across product, capacity, and financials to surface a category mismatch that reframed the core comparison.
- Synthesized company financials and management forecasts into an investment memorandum, identifying and correcting material errors in the capitalization table and valuation that shaped leadership's investment recommendation.
- Produced industry-landscape and client-ready comparison deliverables across multiple review cycles, tracing every figure to filings versus management-reported sources to strengthen the deal team's diligence.

Center for Energy Research (CER), UCSD – *Data Science Consultant*

Jan 2026 – May 2026

- Led **end-to-end** development of a data web service for UCSD's Center for Energy Research, turning the Director's energy-security and infrastructure-risk priorities into product requirements grounded in global oil-trade and EV-adoption data.
- Directed a team of five across the **full product-management** lifecycle, delivering a **dynamic dashboard** and 10-year demand forecast tracking EV adoption and oil-import dependency.
- Distilled complex quantitative findings into strategic recommendations, presenting product outcomes and energy-market trends directly to the Director and senior leadership to guide long-term scenario planning.

Xiang-Shan, Hsinchu – *Supply Chain & Data Analyst*

Jun 2025 – Aug 2025

- Initiate development of a digital-payment platform that lifted revenue **30%** by expanding payment options and improving procurement planning and cost controls.
- Cut inventory-reporting time **50%** by building an automated Excel tracking system that gave sales and procurement teams real-time data for faster allocation decisions.
- Planned and coordinated a \$20K+ initiative end-to-end, managing procurement and allocation of 2,800+ units across 200+ recipients under inventory and demand constraints.

Jian-Cang Co, New Taipei City – *Data Analyst Intern*

Jun 2024 – Aug 2024

- Ran data validation and quality checks on production and material datasets using Python and Excel, flagging anomalies to ensure operational consistency and accuracy.
- Built automated Excel dashboards tracking production metrics to improve reporting visibility and decision speed.
- Analyzed material-quality trends and delivered insights via cross-functional collaboration to improve reporting efficiency.

PROJECTS

Next Up: NBA G-League Call-Up Predictor – *Python, Scikit-Learn, XGBoost, Streamlit*

[Live App](#) | [GitHub](#)

- Built a full-stack system with an automated **SportsRadar** API ETL pipeline aggregating player statistics, contract logs, and team rosters across five seasons (2019–2024).
- Developed machine learning models identifying 82% of potential call-up candidates within a highly imbalanced dataset, informing roster and talent-evaluation decisions.
- Designed an interactive **Streamlit** dashboard with call-up simulators and SHAP visualizations that translate model outputs into clear insights for non-technical users.

NourishOne – Food Pantry Access Platform (Hackathon) – *Python, React, Leaflet*

[Live App](#)

- Led data engineering for a 72-hour hackathon web service app, using Python to aggregate, clean, and validate 737 food-pantry locations across DC, Maryland, and Virginia.
- Built a structured location-intelligence dataset capturing operating hours, dietary attributes, donor needs, and full source lineage to support reliable service discovery.
- Integrated structured JSON into a React and Leaflet map interface, enabling users to filter pantries by food type, dietary needs, distance, language access, and support services.

SKILLS & ACTIVITIES

Product & Analytical: Product Management, Project Management, Competitive Analysis, Market Research, Data Analysis, KPI Tracking, Cross-functional Collaboration

Tools & Platforms: Microsoft Excel, Power BI, SQL, GitHub, Azure, AWS Fundamentals, Vercel

Programming: Python (Pandas, NumPy, Scikit-learn), JavaScript, React, HTML/CSS, D3.js, Java, C++

Languages: English, Mandarin, Taiwanese
